

Welcome to Torrot

¡Thanks for becoming a brand-new owner of one of our e-scooter MUVI! Welcome to the Torrot product's Family.

Follow this instruction in order to start enjoying your e-scooter MUVI:

A. Basic Instructions

Turning ON the motorcycle MUVI

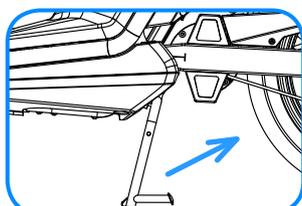

Firstly, introduce the key into the clausor and turn the key to ON position.

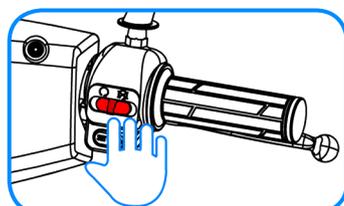

MUVI will perform the following checking process:

Now MUVI is turned ON but stopped, a starting maneuver has to be done to start your trip.

1. Fold the main stand

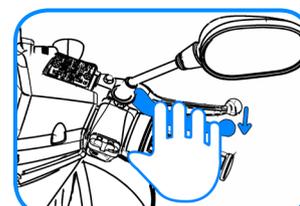

2. Check the starter button

Starter

Stopping

3. Trigger one of the two brake levers.

¡START ON A GOOD FOOT !
This sheet has been done in order to make easier your first steps with the e-scooter MUVI.

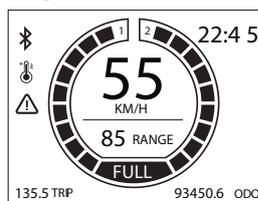

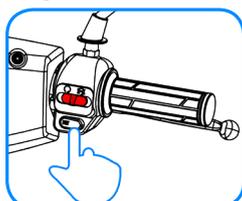

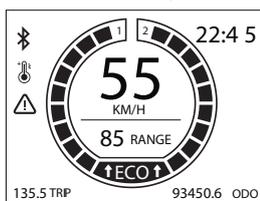

For extended information about, look up the MUVI User Manual and check all the information. It can be found easily in the USB provided by Torrot and in our website:

www.torrot.com/muvi

¡Now your MUVI is ready to be driven!

Driving Modes

The ECO mode is shown, by default, every time that the motorcycle is turned on. It's possible to change to FULL mode pushing SET button.

ECO
ECO mode **with arrows**, by default, manages and controls the supplying power to achieve higher ranges. It's possible to change to FULL mode.

Hold up SET button during 1 sec and release.

Do it again to get back to ECO mode.

FULL
Mode that modify the performance of the motorcycle to give the maximum power, affecting the final range.

ECO
ECO mode **without arrows**, same characteristics but without being able to change to FULL mode. It self-activated when:

- The MUVI is turned on with only 1 battery
- The 2 batteries have a charging difference of more than a 20% between them.
- When a battery has the charge below the 20%.

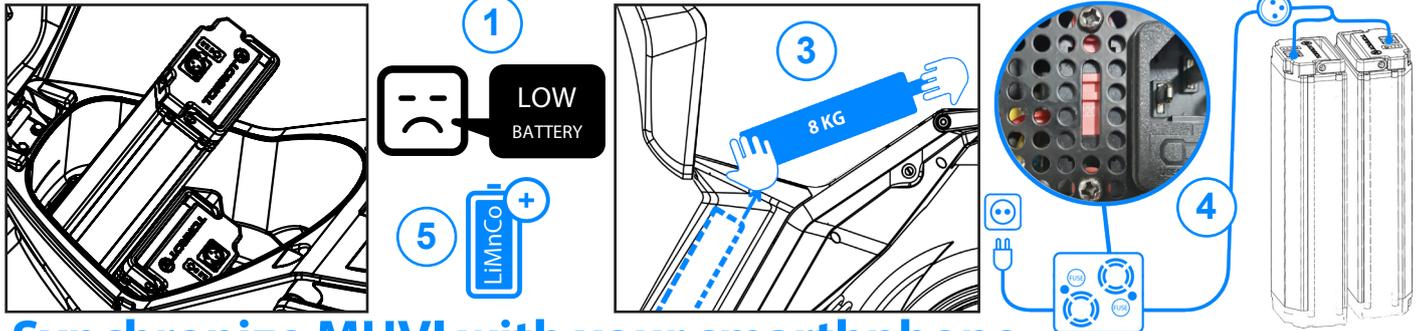

B. Batteries: charging and correct use

Batteries charging

VEHICLE FIRST USE

1. Power on the motorcycle and check that the low battery voltage picture is not shown.
2. Do not remove the batteries when vehicle is powered on.
3. These batteries are heavy, 8 Kg each one. It is essential removing them very carefully, putting one hand in the handle and the other one below the battery to avoid damages to the vehicle, on the battery or even injuries caused by imbalance or sliding.
4. Before the first charge, check that the red switch of the charger has the correct voltage position related to your country (110V/220V).

5. Batteries' are make up of High Energetic density Ion Lithium cells. Do not manipulate them in any case. Disobey this instruction has electrical and chemical hazard and can involve material damages and serious personal harm.

WARNINGS AND BATTERIES MAINTENANCE

- Charge batteries to the maximum level before every use.
- Do not never let the battery level below the 20% of charge.
- The warranty of the batteries gets annul if the battery is without being charged below the 20% of the battery level more than 40 days.
- Do never charge the batteries with the charger inside the vehicle.
- Avoid charging and exposing the batteries to extreme cold or extreme hot.
- Avoid hits, vibrations or high humidity environments.
- It is forbbiden to manipulate the batteries or the charger.

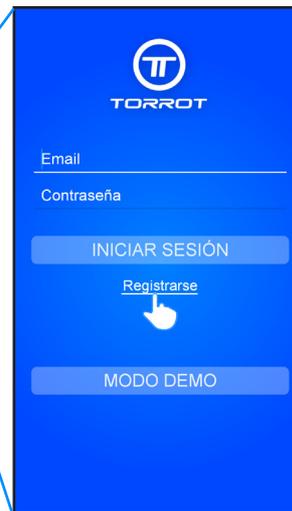

C. Synchronize MUVI with your smartphone
